

Concrete products

With the variety of concrete-related products on the market today, there is always something to learn about. One or more of these products — software, anchor bolts, rebar splicing systems, protective coatings, precast/prestressed concrete flooring products, concrete testing systems, or even wet curing blankets — could give your team an edge by saving time or money on your next project.

In response to an open invitation from **Structural Engineering & Design**, a number of companies provided the following information about their products. Company web addresses are provided for immediate access to additional information. To participate in **Structural Engineering & Design** Specifiers Guides, visit www.gostructural.com/specguide.

Acoustic Concrete Tester from **Inspection Instruments, Inc.** (www.inspectioninstruments.net) evaluates concrete bridge decks, pavements, retaining walls, slabs, tunnel liners, and footings without coring. Light and simple to use, it quickly examines if a concrete element is built to the specified thickness and aids in reassuring that it is free of flaws. It also features ultrasonic echo technology.
